## ■ Nozawa Nishikogoi Center in Nagano Prefecture

They mixed Miracle Animal(r) with Koi feed to raise Tosai, Nisai and other Koi in a mud pond in 2006. A while after using it, they found that the Tosai grew up in much better form than usual with the white background coming out well and shining. Similarly, the Nisai and older Koi had little or no parasites on them, and they were in good health as they had more sticky mucous membranes.

Tosai with beautiful white background

Nisai and older Koi in better form

After using Miracle Animal(r), water was drained from the mud pond to analyze the soil. Thanks to the probiotic effects of Miracle Animal(r), the soil was found to have become excellent earth containing plenty of lactic acid bacteria, yeast, actinomycetes and others.

One of their Koi won two prizes:

- (1) Kokugyo Prize in German Koi 12 bu at the 38th All Nippon Koi Show
- (2) Grand Champion in 12 bu at the 17th Young Koi Show in Nagano

### **Some Japanese Koi farms that use Miracle Animal(r):**
